- ▶ Combinatory logic: Schönfinkel 1920 (Hilbert style proof theory for propositional logic)
- ▶ Lambda calculus: Church 1936 (Gentzen natural deduction)
- ▶ Originally developed for logic
- ▶ They are equivalent (Rosser 1935)

Combinatory logic and lambda calculus

Moses Schönfinkel

- ▶ Combinatory logic: Schönfinkel 1920 (Hilbert style proof theory for propositional logic)
- ▶ Lambda calculus: Church 1936 (Gentzen natural deduction)
- ▶ Originally developed for logic
- ▶ They are equivalent (Rosser 1935)
- ▶ Spin-off from dependently typed combinatory logic

Traditional presentation

Combinatory logic

$t ::= K \mid S \mid t \cdot t'$

Lambda calculus

$t ::= x \mid \lambda x.t \mid t \cdot t'$

Traditional presentation

Combinatory logic

Tm : Set
 K : Tm
 S : Tm
 $_ \cdot _$: $Tm \rightarrow Tm \rightarrow Tm$

Lambda calculus

Tm : Set
 var : $\mathbb{N} \rightarrow Tm$
 lam : $Tm \rightarrow Tm$
 $_ \cdot _$: $Tm \rightarrow Tm \rightarrow Tm$

Traditional presentation

Combinatory logic

Tm : Set
 K : Tm
 S : Tm
 $_ \cdot _$: $Tm \rightarrow Tm \rightarrow Tm$

 $_ \in _$: $Tm \rightarrow Ty \rightarrow Prop$
 tyK : $K \in A \Rightarrow B \Rightarrow A$
...

Lambda calculus

Tm : Set
 var : $\mathbb{N} \rightarrow Tm$
 lam : $Tm \rightarrow Tm$
 $_ \cdot _$: $Tm \rightarrow Tm \rightarrow Tm$

 $_ \vdash _ \in _$: $Con \rightarrow Tm \rightarrow Ty \rightarrow Prop$
 $tylam$: $\Gamma, A \vdash t \in B \rightarrow$
 $\Gamma \vdash t \in A \Rightarrow B$
...

Intrinsic presentation

Combinatory logic

$Tm : Ty \rightarrow Set$
 $K : Tm (A \Rightarrow B \Rightarrow A)$
 $S : Tm ((A \Rightarrow B \Rightarrow C) \Rightarrow$
 $\quad (A \Rightarrow B) \Rightarrow A \Rightarrow C)$
 $_ \cdot _ : Tm (A \Rightarrow B) \rightarrow$
 $\quad Tm A \rightarrow Tm B$

Lambda calculus

$Tm : Con \rightarrow Ty \rightarrow Set$
 $zero : Tm (\Gamma, A) A$
 $suc : Tm \Gamma A \rightarrow$
 $\quad Tm (\Gamma, B) A$
 $_ \cdot _ : Tm \Gamma (A \Rightarrow B) \rightarrow$
 $\quad Tm \Gamma A \rightarrow Tm \Gamma B$
 $lam : Tm (\Gamma, B) A \rightarrow$
 $\quad Tm \Gamma (A \Rightarrow B)$

Intrinsic presentation

Combinatory logic

$Tm : Ty \rightarrow Set$
 $K : Tm (A \Rightarrow B \Rightarrow A)$
 $S : Tm ((A \Rightarrow B \Rightarrow C) \Rightarrow$
 $(A \Rightarrow B) \Rightarrow A \Rightarrow C)$
 $_ \cdot _ : Tm (A \Rightarrow B) \rightarrow$
 $Tm A \rightarrow Tm B$

Lambda calculus

$Tm : Con \rightarrow Ty \rightarrow Set$
 $zero : Tm (\Gamma, A) A$
 $suc : Tm \Gamma A \rightarrow$
 $Tm (\Gamma, B) A$
 $_ \cdot _ : Tm \Gamma (A \Rightarrow B) \rightarrow$
 $Tm \Gamma A \rightarrow Tm \Gamma B$
 $lam : Tm (\Gamma, B) A \rightarrow$
 $Tm \Gamma (A \Rightarrow B)$

Parameterised by $Ty : Set$
 $_ \Rightarrow _ : Ty \rightarrow Ty \rightarrow Ty$

Intrinsic presentation

Combinatory logic

$Tm : Ty \rightarrow Set$
 $K : Tm (A \Rightarrow B \Rightarrow A)$
 $S : Tm ((A \Rightarrow B \Rightarrow C) \Rightarrow$
 $\quad (A \Rightarrow B) \Rightarrow A \Rightarrow C)$
 $_ \cdot _ : Tm (A \Rightarrow B) \rightarrow$
 $\quad Tm A \rightarrow Tm B$

Lambda calculus

$Tm : Con \rightarrow Ty \rightarrow Set$
 $zero : Tm (\Gamma, A) A$
 $suc : Tm \Gamma A \rightarrow$
 $\quad Tm (\Gamma, B) A$
 $_ \cdot _ : Tm \Gamma (A \Rightarrow B) \rightarrow$
 $\quad Tm \Gamma A \rightarrow Tm \Gamma B$
 $lam : Tm (\Gamma, B) A \rightarrow$
 $\quad Tm \Gamma (A \Rightarrow B)$

Parameterised by $Ty : Set$
 $_ \Rightarrow _ : Ty \rightarrow Ty \rightarrow Ty$
Untyped is a special case.

From lambda terms to combinators

$t \cdot u := t \cdot u$

$K := \lambda x y . x$

$S := \lambda f g x . f \cdot x \cdot (g \cdot x)$

From lambda terms to combinators

$t \cdot u := t \cdot u$

$K := \text{lam } (\text{lam } 1)$

$S := \text{lam } (\text{lam } (\text{lam } (2 \cdot 0 \cdot (1 \cdot 0))))$

From combinators to lambda terms

We extend the language of combinators with variables:

$$\text{Tm} \quad : \quad \text{Con} \rightarrow \text{Ty} \rightarrow \text{Set}$$

From combinators to lambda terms

We extend the language of combinators with variables:

$Tm : Con \rightarrow Ty \rightarrow Set$

$zero : Tm (\Gamma, A) A$

From combinators to lambda terms

We extend the language of combinators with variables:

$\text{Tm} : \text{Con} \rightarrow \text{Ty} \rightarrow \text{Set}$

$\text{zero} : \text{Tm } (\Gamma, A) A$

$\text{suc} : \text{Tm } \Gamma A \rightarrow \text{Tm } (\Gamma, B) A$

From combinators to lambda terms

We extend the language of combinators with variables:

$\text{Tm} : \text{Con} \rightarrow \text{Ty} \rightarrow \text{Set}$

$\text{zero} : \text{Tm } (\Gamma, A) A$

$\text{suc} : \text{Tm } \Gamma A \rightarrow \text{Tm } (\Gamma, B) A$

$K : \text{Tm } \Gamma (A \Rightarrow B \Rightarrow A)$

$S : \text{Tm } \Gamma ((A \Rightarrow B \Rightarrow C) \Rightarrow (A \Rightarrow B) \Rightarrow A \Rightarrow C)$

$_ \cdot _ : \text{Tm } \Gamma (A \Rightarrow B) \rightarrow \text{Tm } \Gamma A \rightarrow \text{Tm } \Gamma B$

From combinators to lambda terms

$$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam } \text{zero} \quad :=$

$\text{lam } (\text{suc } x) :=$

$\text{lam } K \quad :=$

$\text{lam } S \quad :=$

$\text{lam } (t \cdot u) :=$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} \quad \quad \quad := I$

$\text{lam (suc } x) \quad :=$

$\text{lam } K \quad \quad \quad :=$

$\text{lam } S \quad \quad \quad :=$

$\text{lam } (t \cdot u) \quad \quad :=$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) :=$

$\text{lam } K :=$

$\text{lam } S :=$

$\text{lam (t} \cdot u) :=$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) := K \cdot x$

$\text{lam } K :=$

$\text{lam } S :=$

$\text{lam } (t \cdot u) :=$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} \quad \quad \quad := S \cdot K \cdot K$

$\text{lam (suc } x) \quad := K \cdot x$

$\text{lam } K \quad \quad \quad := K \cdot K$

$\text{lam } S \quad \quad \quad :=$

$\text{lam } (t \cdot u) \quad \quad :=$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} \quad \quad \quad := S \cdot K \cdot K$

$\text{lam (suc } x) \quad := K \cdot x$

$\text{lam } K \quad \quad \quad := K \cdot K$

$\text{lam } S \quad \quad \quad := K \cdot S$

$\text{lam } (t \cdot u) \quad \quad :=$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} \quad \quad \quad := S \cdot K \cdot K$

$\text{lam (suc } x) \quad := K \cdot x$

$\text{lam } K \quad \quad \quad := K \cdot K$

$\text{lam } S \quad \quad \quad := K \cdot S$

$\text{lam } (t \cdot u) \quad \quad := S \cdot \text{lam } t \cdot \text{lam } u$

We add equations

$Tm : Ty \rightarrow Set$

$K : Tm (A \Rightarrow B \Rightarrow A)$

$S : Tm ((A \Rightarrow B \Rightarrow C) \Rightarrow (A \Rightarrow B) \Rightarrow A \Rightarrow C)$

$\frac{\cdot}{_} : Tm (A \Rightarrow B) \rightarrow Tm A \rightarrow Tm B$

$\overline{K\beta} : K \cdot u \cdot v = u$

$S\beta : S \cdot f \cdot g \cdot u = f \cdot u \cdot (g \cdot u)$

We add equations

$Tm : Ty \rightarrow Set$

$K : Tm (A \Rightarrow B \Rightarrow A)$

$S : Tm ((A \Rightarrow B \Rightarrow C) \Rightarrow (A \Rightarrow B) \Rightarrow A \Rightarrow C)$

$_ \cdot _ : Tm (A \Rightarrow B) \rightarrow Tm A \rightarrow Tm B$

$\overline{K\beta} : K \cdot u \cdot v = u$

$S\beta : S \cdot f \cdot g \cdot u = f \cdot u \cdot (g \cdot u)$

Typed combinatory algebra.

We add equations

$$\begin{array}{ll} \text{Tm} & : \text{Ty} \rightarrow \text{Set} \\ K & : \text{Tm } (A \Rightarrow B \Rightarrow A) \\ S & : \text{Tm } ((A \Rightarrow B \Rightarrow C) \Rightarrow (A \Rightarrow B) \Rightarrow A \Rightarrow C) \\ _ \cdot _ & : \text{Tm } (A \Rightarrow B) \rightarrow \text{Tm } A \rightarrow \text{Tm } B \\ \overline{K\beta} & : K \cdot u \cdot v = u \\ S\beta & : S \cdot f \cdot g \cdot u = f \cdot u \cdot (g \cdot u) \end{array}$$

Typed combinatory algebra.
The (quotiented) syntax is the initial algebra.

We add equations: calculus with variables

$Tm : Con \rightarrow Ty \rightarrow Set$

zero

suc

K

S

$\frac{\cdot}{\overline{K\beta}}$

$: K \cdot u \cdot v = u$

$S\beta : S \cdot f \cdot g \cdot u = f \cdot u \cdot (g \cdot u)$

$sucK : suc\ K = K$

$sucS : suc\ S = S$

$suc\cdot : suc\ (t \cdot u) = suc\ t \cdot suc\ u$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) := K \cdot x$

$\text{lam } K := K \cdot K$

$\text{lam } S := K \cdot S$

$\text{lam } (t \cdot u) := S \cdot \text{lam } t \cdot \text{lam } u$

$\text{lam } K\beta$

$\text{lam } S\beta$

$\text{lam suc}K$

$\text{lam suc}S$

$\text{lam suc} \cdot$

From combinators to lambda terms

 $\text{lam } S\beta$
 lam sucK
 lam sucS
 $\text{lam suc} \cdot$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) := K \cdot x$

$\text{lam } K := K \cdot K$

$\text{lam } S := K \cdot S$

$\text{lam } (t \cdot u) := S \cdot \text{lam } t \cdot \text{lam } u$

$\text{lam } K\beta : S \cdot (S \cdot \text{lam } K \cdot \text{lam } u) \cdot \text{lam } v = \text{lam } u$

$\text{lam } S\beta$

lam sucK

lam sucS

$\text{lam suc} \cdot$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) := K \cdot x$

$\text{lam } K := K \cdot K$

$\text{lam } S := K \cdot S$

$\text{lam } (t \cdot u) := S \cdot \text{lam } t \cdot \text{lam } u$

$\text{lam } K\beta : S \cdot (S \cdot (K \cdot K) \cdot \text{lam } u) \cdot \text{lam } v = \text{lam } u$

$\text{lam } S\beta$

lam sucK

lam sucS

$\text{lam suc} \cdot$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$
 $\text{lam zero} \quad \quad \quad := S \cdot K \cdot K$
 $\text{lam (suc } x) \quad := K \cdot x$
 $\text{lam } K \quad \quad \quad := K \cdot K$
 $\text{lam } S \quad \quad \quad := K \cdot S$
 $\text{lam } (t \cdot u) \quad \quad := S \cdot \text{lam } t \cdot \text{lam } u$
 $\text{lam } K\beta \quad \quad \quad : S \cdot (S \cdot (K \cdot K) \cdot \text{lam } u) \cdot \text{lam } v = \text{lam } u$
 $\text{lam } S\beta$
 lam sucK
 lam sucS
 $\text{lam suc} \cdot$

We add a new equation to the theory:

$\text{lam } K\beta : S \cdot (S \cdot (K \cdot K) \cdot t) \cdot t' = t$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) := K \cdot x$

$\text{lam } K := K \cdot K$

$\text{lam } S := K \cdot S$

$\text{lam } (t \cdot u) := S \cdot \text{lam } t \cdot \text{lam } u$

$\text{lam } K\beta : S \cdot (S \cdot (K \cdot K) \cdot \text{lam } u) \cdot \text{lam } v = \text{lam } u$

$\text{lam } S\beta$

$\text{lam suc}K$

$\text{lam suc}S$

$\text{lam suc} \cdot$

$\text{lam lam}K\beta : \text{lam } (S \cdot (S \cdot (K \cdot K) \cdot t) \cdot t') = \text{lam } t$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) := K \cdot x$

$\text{lam } K := K \cdot K$

$\text{lam } S := K \cdot S$

$\text{lam } (t \cdot u) := S \cdot \text{lam } t \cdot \text{lam } u$

$\text{lam } K\beta : S \cdot (S \cdot (K \cdot K) \cdot \text{lam } u) \cdot \text{lam } v = \text{lam } u$

$\text{lam } S\beta$

$\text{lam suc}K$

$\text{lam suc}S$

$\text{lam suc} \cdot$

Point free version:

$\text{lam}K\beta : \lambda t t' . S \cdot (S \cdot (K \cdot K) \cdot t) \cdot t' = \lambda t t' . t$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) := K \cdot x$

$\text{lam } K := K \cdot K$

$\text{lam } S := K \cdot S$

$\text{lam } (t \cdot u) := S \cdot \text{lam } t \cdot \text{lam } u$

$\text{lam } K\beta : S \cdot (S \cdot (K \cdot K) \cdot \text{lam } u) \cdot \text{lam } v = \text{lam } u$

$\text{lam } S\beta$

$\text{lam suc}K$

$\text{lam suc}S$

$\text{lam suc} \cdot$

The λ s can be removed:

$\text{lam}K\beta : S \cdot (K \cdot S) \cdot (S \cdot (K \cdot K)) = K$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$
 $\text{lam zero} \quad := S \cdot K \cdot K$
 $\text{lam (suc } x) := K \cdot x$
 $\text{lam } K \quad \quad := K \cdot K$
 $\text{lam } S \quad \quad := K \cdot S$
 $\text{lam } (t \cdot u) := S \cdot \text{lam } t \cdot \text{lam } u$
 $\text{lam } K\beta \quad : S \cdot (S \cdot (K \cdot K) \cdot \text{lam } u) \cdot \text{lam } v = \text{lam } u$
 $\text{lam } S\beta$
 lam sucK
 lam sucS
 $\text{lam suc} \cdot$

It only holds in the empty context:

$\text{lam } K\beta : S\{\diamond\} \cdot (K\{\diamond\} \cdot S\{\diamond\}) \cdot (S\{\diamond\} \cdot (K\{\diamond\} \cdot K\{\diamond\})) = K\{\diamond\}$

From combinators to lambda terms

$\text{lam} : \text{Tm } (\Gamma, A) B \rightarrow \text{Tm } \Gamma (A \Rightarrow B)$

$\text{lam zero} := S \cdot K \cdot K$

$\text{lam (suc } x) := K \cdot x$

$\text{lam } K := K \cdot K$

$\text{lam } S := K \cdot S$

$\text{lam } (t \cdot u) := S \cdot \text{lam } t \cdot \text{lam } u$

$\text{lam } K\beta : S \cdot (S \cdot (K \cdot K) \cdot \text{lam } u) \cdot \text{lam } v = \text{lam } u$

$\text{lam } S\beta$

$\text{lam suc}K$

$\text{lam suc}S$

$\text{lam suc} \cdot$

$\text{lam lam}K\beta$ holds vacuously

From combinators to lambda terms

lam : Tm (Γ, A) B \rightarrow Tm Γ ($A \Rightarrow B$)
lam zero := S.K.K
lam (suc x) := K.x
lam K := K.K
lam S := K.S
lam (t.u) := S.lam t.lam u
lam K β := from lamK β (NEW)
lam S β := from lamS β (NEW)
lam suck := refl
lam sucS := refl
lam suc. := from lamsuc. (NEW)
lam lamK β holds vacuously
lam lamS β holds vacuously
lam lamsuc. holds vacuously

Three theories

- ▶ C: combinatory logic + 3 new equations needed to define lam
- ▶ C-var: combinatory logic with variables + 3 new equations
- ▶ L: lambda calculus

Three theories

- ▶ C: combinatory logic + 3 new equations + η
(translated point-free closed version of $\mathbf{t} = \lambda x. \mathbf{t} \cdot x$)
- ▶ C-var: combinatory logic with variables + 3 new equations + η
- ▶ L: lambda calculus with β and η

Three theories

- ▶ C: combinatory logic + 3 new equations + η
(translated point-free closed version of $\mathfrak{t} = \lambda x. \mathfrak{t} \cdot x$)
- ▶ C-var: combinatory logic with variables + 3 new equations + η
- ▶ L: lambda calculus with β and η

$$\mathrm{Tm}_C A \cong \mathrm{Tm}_{C\text{-var}} \diamond A$$

$$\mathrm{Tm}_{C\text{-var}} \Gamma A \cong \mathrm{Tm}_L \Gamma A$$

Three theories

- ▶ C: combinatory logic + 3 new equations + η
- ▶ C-var: combinatory logic with variables + 3 new equations + η
- ▶ L: lambda calculus with β and η

$$\mathrm{Tm}_C A \cong \mathrm{Tm}_{C\text{-var}} \diamond A \cong \mathrm{Tm}_L \diamond A$$

Three theories

- ▶ C: combinatory logic + 3 new equations + η
- ▶ C-var: combinatory logic with variables + 3 new equations + η
- ▶ L: lambda calculus with β and η

$$\mathrm{Tm}_C(\Gamma \Rightarrow^* A) \cong \mathrm{Tm}_{C\text{-var}} \diamond (\Gamma \Rightarrow^* A) \cong \mathrm{Tm}_L \diamond (\Gamma \Rightarrow^* A) \cong \mathrm{Tm}_L \Gamma A$$

Three theories

- ▶ C: combinatory logic + 3 new equations + η
- ▶ C-var: combinatory logic with variables + 3 new equations + η
- ▶ L: lambda calculus with β and η

$$\text{Tm}_C(\Gamma \Rightarrow^* A) = \text{Tm}_{C\text{-var}} \diamond (\Gamma \Rightarrow^* A) = \text{Tm}_L \diamond (\Gamma \Rightarrow^* A) = \text{Tm}_L \Gamma A$$

Three theories

- ▶ C: combinatory logic + 3 new equations + η
- ▶ C-var: combinatory logic with variables + 3 new equations + η
- ▶ L: lambda calculus with β and η

$$\text{Tm}_C(\Gamma \Rightarrow^* A) = \text{Tm}_{C\text{-var}} \diamond (\Gamma \Rightarrow^* A) = \text{Tm}_L \diamond (\Gamma \Rightarrow^* A) = \text{Tm}_L \Gamma A$$

Open (?) problems in the algebraic setting.

Three theories

- ▶ C: combinatory logic + 3 new equations + η
- ▶ C-var: combinatory logic with variables + 3 new equations + η
- ▶ L: lambda calculus with β and η

$$\text{Tm}_C(\Gamma \Rightarrow^* A) = \text{Tm}_{C\text{-var}} \diamond (\Gamma \Rightarrow^* A) = \text{Tm}_L \diamond (\Gamma \Rightarrow^* A) = \text{Tm}_L \Gamma A$$

Open (?) problems in the algebraic setting. What is...

- ▶ ...the combinatory equivalent of L without η ?

Three theories

- ▶ C: combinatory logic + 3 new equations + η
- ▶ C-var: combinatory logic with variables + 3 new equations + η
- ▶ L: lambda calculus with β and η

$$\text{Tm}_C(\Gamma \Rightarrow^* A) = \text{Tm}_{C\text{-var}} \diamond (\Gamma \Rightarrow^* A) = \text{Tm}_L \diamond (\Gamma \Rightarrow^* A) = \text{Tm}_L \Gamma A$$

Open (?) problems in the algebraic setting. What is...

- ▶ ...the combinatory equivalent of L without η ?
- ▶ ...the lambda equivalent of C without η ?

Three theories
